- 25 Troubleshooting

New here? Read sections 1 to 15 in order. That is the whole daily loop: sign in, work a lead, book an appointment, record the outcome, create the deal and chase the paperwork, with 15 covering the sales kit you work from. Sections 16 and 17 are yours too — connecting your own Facebook, and the training your team leader has published. Sections 18 to 22 are for managers and administrators, and you will not be able to reach those screens as an agent.

1 Signing in

There are **two doors**, and you pass through both. The first is Cloudflare, which decides whether you may see the CRM at all; the second is the CRM's own sign-in, which decides who you are. Expect both the first time — people who are not expecting the first one assume something has gone wrong.

Your first sign-in

- 1 Open **<https://crm.lanthornproperties.com>** in your browser. Add it to your phone home screen — you will use it in the field.
- 2 **Door one.** A Cloudflare page asks for your email address. Enter the one your administrator registered. It emails you a six-digit code; type that in. This does not happen again for 24 hours.
- 3 **Door two.** The CRM's own sign-in appears. Sign in with **the work email address your administrator was given**. Sign-in is handled by Clerk; you do not create a password inside the CRM.
- 4 If you land on **Account pending approval**, that is correct. New accounts arrive inactive and cannot see any client data.
- 5 Tell your administrator. Once they activate you, sign in again and you reach the dashboard.

The six-digit code often lands in Spam the first time. It is a new sender on a new domain, which is exactly what mail providers are suspicious of. Look there before reporting a problem, mark it **Not spam**, and it will behave afterwards.

SCREENSHOT

01-sign-in — The sign-in screen.

The sign-in screen.

Use the right email. Your Clerk account is matched to your staff record by email address. Sign up with a different address and the system has no way to know who you are — it creates a brand-new inactive account instead of finding yours.

What your role controls

Role	Sees	Can also
Agent	Their own leads, contacts, deals and appointments	—
Manager	Their team's records	Reassign leads, create projects, manage lead pools, see advertising spend
Admin	Everything in the agency	All of the above, plus approving accounts and setting roles

This is enforced in the data itself rather than by hiding buttons: an agent cannot reach another agent's client by guessing a web address.

2 The screens

Screen	What it is for
Dashboard	Your day at a glance — what needs chasing
Leads	Enquiries that have not yet become clients
Contacts	People you have qualified and are working with
Projects	New launch developments and their unit types
Properties	Resale and rental listings
Pipeline	Deals in progress, on a board by stage
Appointments	Gallery visits and viewings, and how they went
Inbox	Follow-ups due, paperwork due, and notifications
Reports	The funnel, by project and by agent
Leads capture	Connect <i>your own</i> Facebook and pick the lead forms you want
Learning	Training videos from your team leader, and what you have watched
Templates (<i>manager</i>)	Reusable WhatsApp and email messages
Users (<i>manager</i>)	Approving accounts and setting roles

Search everything. The search box at the top of the sidebar looks across leads, contacts, projects and properties at once, so you do not have to guess which screen a name is filed under. Press **Ctrl-K (Cmd-K** on a Mac) from anywhere to open it without reaching for the mouse; type, then press **Enter** on the result you want.

3 Your dashboard

The dashboard answers one question: *what needs me today?* It shows your lead and pipeline counts, follow-ups that are due, and two warnings that only appear when they matter — a red banner counting overdue documents, and a count of leads that have gone quiet.

The dashboard.

No news means no banner. A permanent “0 overdue” row is furniture people learn to skip, so those warnings are absent entirely when there is nothing wrong. If you see one, it is real.

4 Where leads come from

Four routes in, and the route decides who gets the lead:

How it arrives	Who it goes to
New Lead button	Whoever created it — you. An agent cannot assign to somebody else
Import CSV	Whoever uploaded the file
Facebook or Instagram lead form	The project's lead pool, in rotation
Website form or public API	The same rotation, or the agency-wide one if no project is attached

So a lead you sourced yourself is yours from the moment you enter it. Rotation only ever touches leads nobody owns yet — the ones the agency paid for.

The leads list

Search by name, phone or email; filter by status. The **Assigned to** column shows who owns each lead, and calls out **Unassigned** in red — a lead nobody owns is the one thing on that screen worth noticing.

The screenshot shows the 'Leads' section of the Lanthorn Properties CRM. The sidebar on the left includes a 'Leads' button under 'LEAD MANAGEMENT'. The main content area has a search bar and filters for lead status (All, New, No Pick Up, Not Reachable, Follow Up, Call Another Time, Appointment, Closed, Not Searching). Below the filters is a table with the following data:

Lead	Source	Info	Product	Interest	Budget	Assigned to	Status
lead3 +60163373353	Added by hand	—	—	—	—	rodney liong	New
lead2 +60178899011	Added by hand	—	Met1	—	—	rodney liong	Appointment
Rodney Liong +60163373358	Meta meta form 1613980423612055	—	Met1	—	—	rodney liong	Follow Up

The leads list, with search, status filter and the Assigned to column.

Adding one by hand

Leads → **New Lead**. Name and phone are required; everything else helps later. Set the **Project** if the enquiry is about a specific launch — that is what makes per-project reporting work.

Project

Not a project enquiry

Which launch this enquiry came in for. Drives the funnel and cost-per-lead.

Assign to

Auto / me

The New Lead form.

Importing a CSV

Leads → **Import CSV**, for a list from a roadshow or an export from elsewhere. Duplicates are detected by phone and email, so re-importing the same file does not create the same person twice.

Lanthorn Properties CRM
rodney liong · Administrator

Import leads
Bulk-add leads from a CSV file. Duplicates are merged by phone or email.

CSV format
First row must be headers. Recognised columns: name phone email interest preferredAreas budgetMin budgetMax . Column names are matched loosely, so exports from Facebook Lead Ads ("Full Name", "Phone Number") and Google Ads work without editing the file. Phone accepts 012-345 6789 or +60123456789. Budgets accept 850000, "RM 850,000" or 850k.

Choose File No file chosen

name,phone,email,interest,preferredAreas,budgetMin,budgetMax
Ali,+60123456789,ali@mail.com,buy,Mont Kiara,800000,1200000

☐ Distribute evenly across agents
For company-wide lists. Leave unticked to keep those leads yourself — which is

The CSV import screen with its summary of results.

5 Working a lead

Open a lead to see everything in one place: their details, the project they enquired about, and a timeline of everything that has happened.

A lead record with its activity timeline.

- 1 Log every contact.** Call, WhatsApp, email or note. This is not admin for its own sake — it is what proves you are working the lead, and it is what stops a project lead being passed to somebody else.
- 2 Set a follow-up date** when you log something. It appears on your dashboard and Reminders on that day, so you have one list rather than a separate diary.
- 3 Use WhatsApp from the lead.** The button opens a chat with their number filled in, and templates fill in their name and the project.

Log it the same day. Everything downstream — pass-on, response-time reporting, the funnel — reads the timeline. Work that is not logged did not happen as far as the system is concerned.

6 Qualify or disqualify

A lead has four statuses: **new**, **contacted**, **qualified** and **disqualified**.

When someone is genuinely interested and can proceed, use **Qualify**. That converts them to a **contact** — carrying across their details, their consent record and their history — and a contact is what a deal is built on.

When they are not a buyer, mark them **disqualified** rather than leaving them sitting in your list. It keeps your own numbers honest and stops the system chasing you about them.

The Qualify and Disqualify buttons on a lead.

Disqualifying is part of the funnel, not a failure. Conversion is measured against every lead received, including the ones you rejected. Rejecting a poor lead quickly is good work.

7 When a lead moves on

On a new launch, a lead left untouched can be passed to the next person in the project's pool. This only happens when *all* of the following are true:

- The lead is attached to a **project**, and that project has a pass-on window set
- It came from the **agency** — a Facebook form, the website or the API. A lead you entered by hand or imported yourself is never passed on
- You have logged **nothing** since it was assigned to you
- There is **no appointment** booked, and it is not marked qualified
- The pool has more than one active person

Any activity at all stops the clock. Log a call and the lead stays yours, and the window restarts from that moment.

Nothing happens quietly. Every transfer writes a note on the lead's timeline naming both agents, and messages each of you. You will never discover it from a colleague.

8 Booking an appointment

From a lead or a contact, choose **Schedule appointment**. Pick the subject — a **project** from the New launch group, or a **property** for a resale viewing. It is one or the other, never both.

Then set the date and time, and choose who is closing it:

- **I am closing this myself** — the usual case.
- **Another agent** — under a setter and closer split, you booked it and they run the presentation. Both of you are recorded, both of you can see it, and commission splits on that record later.

Booking a project appointment links the lead to that project if it did not already have one. Somebody who turns up at a gallery is a lead for that project, and the timeline says so.

9 Recording what happened

Appointments opens as a board: Scheduled → Showed up → Booked → No show → Cancelled. Use **Record outcome** on a card after the appointment.

The appointments board with the no-show rate above it.

Status	Then outcome
Showed up	Booked , interested, undecided or not interested
No show	—
Cancelled	—

The **no-show rate** above the board is the most useful operational number in project sales — it tells you whether your confirmations are working. It counts only appointments that reached a verdict, so a fresh booking never dilutes it.

Record the outcome the same day. An appointment with no outcome counts as nothing in the funnel, so a good week can look like a bad one purely because nobody closed the loop.

10 Creating a deal

A deal needs a **contact**, so qualify the lead first. On the contact, choose **Create Deal**.

The **Project** picker decides which pipeline the deal joins, and it is pre-filled from the lead they came in on:

- **A project selected** → new launch deal, starting at **Booked**
- **Left blank** → resale deal, starting at **New**

A line under the picker tells you which you are about to get. Check it before saving.

11 The two pipelines

Pipeline has a **New launch** tab and a **Resale** tab. A deal appears on one and never both.

New launch	Resale
Booked	New
SPA Signed	Contacted
Loan Approved	Viewing Scheduled
Completed	Negotiation
Cancelled	Closed Won / Closed Lost

The pipeline board, on the New launch tab.

A project deal starts at **Booked** rather than at the beginning because the appointment board already owns everything before that. Repeating those steps here would count the same event twice and let the funnel and the pipeline disagree about the same week.

12 The paperwork checklist

Click **Paperwork** on a pipeline card. The checklist is already there, created from the project template, with a suggested due date on each item counted from today:

- Booking form · Booking fee receipt · IC or passport copy · Income documents
- Loan application submitted · **Loan approval letter** · SPA signed · Stamping and legal

SCREENSHOT

12-paperwork — The paperwork checklist on a deal.

The paperwork checklist on a deal.

On each item you can tick it off, change the due date, attach a file, or add your own item at the bottom.

Attaching a file does not tick the item. That is deliberate — somebody still has to confirm the document is the right one and legible. Tick it when you have checked it, not when it uploads.

Overdue items turn red and say how many days late. They also appear on **Reminders** and, when overdue, on the dashboard — so paperwork chases you rather than waiting to be found.

The loan approval letter is the one that kills deals. It expires. Watch its date more closely than the rest.

13 Inbox

Everything still open, on one screen: paperwork with a deadline, the follow-ups you promised, and your notifications.

All and Late

The two tabs at the top right carry their own counts. **All** is the full picture. **Late** strips it back to what has already passed its date — overdue paperwork and overdue follow-ups, nothing else. Start on Late when you have ten minutes and want them spent on the right things.

Paperwork due

Anything due in the next 14 days, plus anything already overdue. Overdue items never drop off, even once they are well past that window.

Items are grouped **by client**, one row per booking, with the project named and a count of what is still outstanding. Click a row to open it and see the individual documents; a booking with something overdue opens by itself, so the case that matters is never hidden behind a click. The right-hand end of each row is the one number that decides whether it needs you today — a red **overdue** count, or the date the next item falls due.

Sorting

Sort	Use it when
Soonest due	The default. What is most urgent, first.
Client A–Z	You know whose file you are looking for and scrolling beats searching.
Newest lead	You want the freshest bookings on top, even if nothing in them is late yet.

The sort is remembered in the page address, so a sorted Inbox is a link you can send to a colleague and they will see what you saw.

Follow-ups and notifications

Below the paperwork sit your follow-ups — every date you set while logging activity. Notifications sit in their own column on a wide screen: leads assigned to you, bookings, and the weekly summary.

Keeping it clean

Notifications are not meant to be kept forever. **Mark all read** silences the unread dots but leaves the record on the page. **Clear read** takes the tidied ones off it, and asks you to confirm first because it acts on more rows than you can see at once. A single row can be dismissed on its own with the × at its right-hand end — no confirmation, because a one-row mistake is obvious.

The Inbox: paperwork grouped by client, with the sort controls above it.

Nothing here is deleted outright. Cleared and dismissed notifications are hidden, not destroyed, and older ones are purged on a schedule. Paperwork and follow-ups are never cleared from this screen — they leave it by being done.

There is no separate Reminders screen. Follow-ups and paperwork used to live on their own page; both answered “what needs me?”, so an agent had two places to check and reliably checked neither. They are one screen now, and /reminders sends you here.

14 Reports

The funnel is the heart of it:

Leads → Appointments set → Showed up → Booked

with the conversion rate at each step. Underneath, the same figures **by project** and, for managers, **by agent**. A trend chart plots leads, appointments and bookings week by week.

The Reports screen, showing the funnel and the trend.

The period selector — 30 days, 90 days, 6 months, 12 months, All time — drives the funnel, the trend and both tables together. The four tiles at the top are *not* filtered: open pipeline is a snapshot of what is live right now, so windowing it would say something untrue.

Setting and closing are credited separately. Appointments *set* count for whoever booked them; show-ups and bookings count for whoever ran the presentation. A setter who hands over good appointments is never shown as having converted nothing.

A project with leads but no appointments still appears in the table. That is deliberate — it is the interesting case.

15 The sales kit

Every project page carries a **Sales kit**: the selling price list, the brochure and layout plans, the APDL and developer licence, the blank forms you hand a buyer, the panel lawyer, and the showroom location. One place, and always the version the agency stands behind — you never have to ask anyone which price list is the current one.

You cannot change a kit. Managers and administrators publish it; agents read it. That is deliberate: it is the only way two agents can never end up quoting a buyer from two different copies of the same price list.

- **A file** — click to download it. Price lists, brochures, licences, blank forms.
- **A link** — opens elsewhere, such as a shared sheet or a map pin for the showroom.
- **A value** — a plain fact you need at hand, like an HDA account number or a panel banker's direct line.

A project's sales kit, grouped by section.

A unit lock or availability sheet in a kit records only what OUR agents have committed. Other agencies sell these same projects, and their bookings never appear in it. Always confirm a unit is still available with the developer before you promise it to a buyer.

Blank forms live in the kit. Signed ones do not. The buyer's completed and signed copy belongs on that buyer's deal, under the paperwork checklist in section 12 — not back in the kit, which everybody shares.

16 Your Facebook lead capture

Leads capture is **yours**, not the office's. Every agent connects their own Facebook account and chooses their own Pages and lead forms. Leads from a form you picked arrive assigned to you, automatically, within seconds of the person submitting it — no one retypes anything and no one has to notice it first.

Connecting, once

- 1 Open **Leads capture** and press **Connect Facebook**. You are sent to Facebook to log in as yourself.
- 2 Choose the Pages you want leads from. If Facebook offers **Continue with previous settings**, do not take it — press **Edit settings** and tick the Pages, or you will come back with nothing connected.

- 3 Back in the CRM, press **+ New** and pick the lead form by name.
- 4 That is the whole setup. New leads on that form now reach you.

Leads capture, showing one agent's own connections.

Nobody else can see your connection. Not another agent, not a manager, not an administrator — the screen shows only what the signed-in person connected, and your Facebook access token is encrypted and never displayed. If you leave, disconnecting removes it.

A Facebook lead form cannot be edited once it exists — Meta allows only create and archive. Read a new form through before submitting it.

If a lead does not appear, check that the form is still ticked here, then tell your administrator. A lead that Facebook accepted is not lost — Meta retries delivery for 36 hours.

17 Learning Hub

Training material, kept where the work happens. A team leader records or links videos; the agents under them watch and tick them off. It exists so that what a good negotiator knows stops living only in their head.

Library — everybody

Every topic published by your team leader, as cards showing how many chapters there are, roughly how long they run, and how far *you* have got. Open one and you get the video, the leader's notes, any files attached to that chapter, and a chapter list down the side.

Press **Mark as watched** when you finish a chapter. That is the only thing feeding your progress bar, and it is what your leader sees.

The Learning Hub library.

The progress bar is yours alone. It answers “what do I still owe?” rather than showing a team average, which would be a number about somebody else.

My uploads — team leaders

- 1 Create a **topic** — a title, a short summary, and optionally a category.
- 2 Add **chapters** to it. Each chapter is one video: either a link (an unlisted YouTube or Vimeo address is fine, and costs nothing to store) or a file you upload.
- 3 Add notes and any files agents should keep — a script, a checklist, a price list.
- 4 Press **Publish** when it is ready. Until you do, your team cannot see it.

A topic with no chapters cannot be published. An empty topic appearing in your agents' library reads as the CRM being broken rather than as you being half-way through.

Team progress — team leaders

Who has watched what, across your team. Useful before a coaching session, and useful for spotting a topic nobody finishes — which is usually a fact about the topic rather than about the team.

You only see your own team. A leader writes and sees their own material and their own agents' progress. An administrator can read every leader's published library but cannot edit it — training belongs to whoever recorded it.

18 Publishing a sales kit

Managers and administrators only.

Kit items are added from the project page itself, so the person who notices the price list has gone stale is also the person who can replace it.

- 1 Open the project and find the **Sales kit** card.
- 2 **Add an item**, choose the section it belongs in, and give it a name.
- 3 Paste a link, or type a value, or add it and then attach a file to it.
- 4 Use the **Note** field for anything an agent must know before acting on it.

Name items for what they actually are. “Available unit” reads as developer availability; “Unit Lock Sheet” does not. An agent who misreads a label promises a buyer a unit that went last week.

Replacing a file keeps the item and its name, so agents’ habits do not break, and the old file is removed from storage at the same time. Removing an item affects nothing on any deal — deal paperwork is a separate thing entirely.

Files you upload live in the agency’s own storage, reached only through this app. Deactivate somebody’s account and their access ends immediately — which is not true of a shared drive link they saved months ago.

19 Projects and unit types

Managers and administrators only.

Projects → **New Project**. Name, developer, state and area are the minimum. Also worth setting: developer commission rate, expected VP date, gallery address, and the **pass-on window** in days.

Then add **unit types** — Type A, built-up, beds, baths, parking, list price and the nett price after rebate. This is the level agents actually quote at. Every field stays editable afterwards, and editing keeps the type's identity, so any lead or booking pointing at it is not orphaned.

A project with its unit types.

The price range on the project card is calculated, never typed. It comes from the unit types every time the card is drawn, using the nett price where one exists. If you ever see a figure there that matches something you typed into the project itself, something is wrong.

Projects belong to the agency, not to an agent. Every agent can view them; only managers and administrators create, edit or delete. That differs from Properties on purpose — a listing belongs to the agent who won it.

20 Lead pools and pass-on

Managers and administrators only.

On a project page, **Lead pool** decides who receives that project's leads and in what order. New leads go round the list in rotation, so over any stretch of time everyone gets the same number. Position is a seat at the table, not a ranking.

- **Add someone** — they join the end of the rotation, which never disturbs the existing order
- **Up and down arrows** — change the order
- **Pause** — keeps their place but skips them, for somebody on leave
- **Remove** — takes them out entirely

SCREENSHOT

16-lead-pool — A project's lead pool.

A project's lead pool.

Set the pass-on window on the project's edit page. Leave it blank and pass-on never runs — the right setting for a project where one person owns the relationship. A pool of one has nobody to pass to, and the screen says so.

Tell the team when you switch pass-on on. Agents cannot see the pool or the rule from inside the app, so the first hand-over will otherwise be a surprise. And it applies retroactively — switching it on for a project with old untouched leads will move a batch on the first night.

21 Users and templates

Managers and administrators only.

Users is where new sign-ups are approved. Somebody who has signed up appears inactive and can see nothing until you activate them and set their role.

The Users screen, where roles are set and accounts approved.

Deactivate somebody the day they leave. Their sign-in keeps working until you do.

Templates holds reusable WhatsApp and email messages with placeholders for name, project and price, so agents send something consistent without retyping it.

22 Advertising spend

Managers and administrators only. Agents never see agency ad spend.

Reports → **Advertising spend**. Record what each campaign cost and the report divides it by what the campaign produced:

Figure	What it tells you
Cost per lead	Whether the ad is reaching anyone
Cost per appointment	Whether those leads are real
Cost per booking	Whether the campaign works. Judge a live campaign on this
Cost per closed deal	The eventual truth — but months behind

Cost per booking is the one to act on. A booking happens within weeks of the lead; a completed sale is six to eighteen months later, so cost per closed deal is a verdict on last year's advertising and cannot inform this month's budget.

The most useful line is the flagged one. A campaign with money recorded and no matching leads appears as its own row — money out, nothing in. That is the row to look at first.

23 Status vocabulary

Lead status

Status	Means
new	Arrived, nobody has spoken to them
contacted	You have reached them at least once
qualified	Real buyer — converted to a contact
disqualified	Not a buyer. Say so rather than leaving them

Appointment status and outcome

Status	Outcome	Means
scheduled	—	Booked in, not yet happened
showed-up	booked	They turned up and booked a unit
showed-up	interested	Turned up, keen, no booking yet
showed-up	undecided	Turned up, thinking about it
showed-up	not-interested	Turned up, ruled it out
no-show	—	Did not turn up
cancelled	—	Called off beforehand

Words used in this guide

Term	Means
Setter	The agent who owns the client and books the appointment
Closer	The agent who runs the presentation. Often the same person
Lead pool	The agents who receive a project's leads, in rotation
Pass-on	Moving an untouched agency lead to the next person in the pool
Nett price	List price after the developer's rebate — what the buyer pays
VP	Vacant possession — when the developer hands over the unit
SPA	Sale and purchase agreement

24 Protecting client data (PDPA)

Everything in this system is personal data belonging to real people, and Malaysian law gives them rights over it. A few habits keep the agency on the right side of that:

- **Record consent where the form asks for it.** Leads that arrive from a form with a consent question carry the answer automatically — do not overwrite it.
- **Do not export client lists to your own device** unless you have been asked to.
- **Use fake details in screenshots** and in anything you share outside the agency.
- **Tell your administrator immediately** if you think data has gone somewhere it should not have. Early is recoverable; late is not.

Administrators can export everything held about one person, and erase them, from the contact record — that is how a request from a client is answered.

25 Troubleshooting

Symptom	Almost always
The six-digit code never arrived	Check your Spam folder — it usually lands there the first time. If it is not there either, your address is not on the access list; ask your administrator to add it.
Cloudflare says you do not have access	You typed an address your administrator has not registered. Try the exact one they gave you.
Stuck on “Account pending approval”	An administrator has not activated you yet, or you signed up with a different email address than the one they were given.
A screen in this guide is missing from the menu	It is manager or administrator only. Sections 18 to 22 are all like this.
No Edit button on a record	It is not assigned to you, or the lead has already been qualified. Qualified leads become read-only.
WhatsApp does not open	The phone number is not in international format. Edit the record and use +60123456789.
A lead disappeared from your list	It may have been passed on — check its timeline, which names both agents. See section 7.
A follow-up fired at the wrong time	Reminders use Malaysian time. Check the time you entered rather than your device clock.
A file will not upload	Check the file type and your signal. If it keeps failing, tell your administrator.
A page shows an error	Reload once. If it persists, note what you were doing and tell your administrator.

Questions this guide does not answer should go to your system administrator.
